

Case Study

Kembrey Park, Swindon, Wiltshire

Background

A former factory site at Kembrey Park, Swindon, was redeveloped to create a mixed use development (retail, leisure and business) within an urban environment. A new roundabout was formed on the existing highway, together with industrial standard access roads within the site.

Cole Easdon Consultants (CEC) were selected to design the roundabout and internal access roads, providing construction drawings and specifications for the client.

Client

Renelec Construction Ltd

CEC Input

- Transport Assessment
- Detailed design to obtain Section 278 & 38 technical approval
- Liaison with utility companies with regard to plant diversions
- Provision of construction drawings and specifications
- Site supervision
- Road Safety Audit

Benefits of Our Involvement

- Our long standing professional relationships with technical officers from many highway authorities, enabled CEC to resolve complex technical problems quickly and obtain the necessary technical approvals in good time.
- Early meetings with the utility companies to discuss impacts upon the buried and overhead plant, provided the opportunity to adjust the design, to minimise impacts upon plant, and therefore reduce costs attributable to the client.
